

# Dan D'Agostino

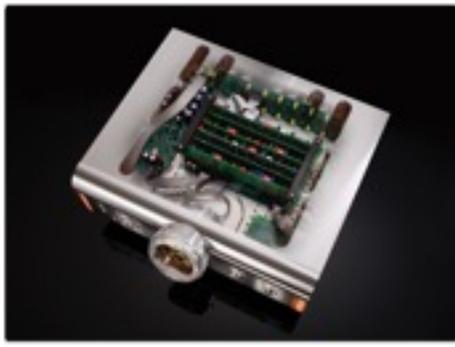

## Master Audio Systems

No name is more closely associated with high-end audio amplifiers than that of Dan D'Agostino. Dan D'Agostino was the founder and chief engineer of Krell Industries through 2009. Now, he embarks on a completely fresh start with a new organization that produces new state-of-the-art designs. The products that bear his name not only achieve new levels of sound quality, they also look like nothing he has built before—more compact, more distinctive, and more living-room-friendly.

The new Dan D'Agostino products also reflect his concern for the environment — an attitude uncommon in an industry where some amplifiers consume hundreds of watts even when they're not in use. Through innovative power-supply design, Dan D'Agostino products consume only the slightest amount of power while idle, so they run cooler and save energy. To achieve this challenge Dan is always looking for the best electronic parts available.

## Success Story

*"The INLYNK system works very well for us. This is the first time we have had an accurate cost per unit and an updated inventory of parts. It will work well for pricing new products too. INLYNK has provided excellent customer service! Every time we have had any questions or problems the response time is quick and professional. I would highly recommend your product and services to anyone in our industry."*

*Petra D'Agostino*

"When searching for a software solution to help us manage our BOMs, parts and work orders we wanted to focus on the company culture as well as the product. We wanted to give our business to people who care and had some kind of expertise in the electronic industry. When we met with the INLYNK staff we were impressed with their understanding of our needs. Their electronic background is certainly a strong asset when they develop their software. Optymo provided many features that work for our company."

"Having a parts and BOM management tool in the same system with version and configuration control, EDI's with most parts vendors in North America and a module to manage our customers, our suppliers and our sub-contractors was just unexpected. The OPTYMO ERP system is the perfect answer to the SME's in the electronic industry."

"From prototyping to manufacturing, we use Optymo, and appreciate the benefits of its exclusive features. Every day we can measure a terrific R.O.I and are quite pleased about it."
